

Drone Project - Second Engineering Worksheet

This English version is formatted for graduate application review. It preserves the engineering purpose, design decisions, validation evidence, and individual contribution signals of the original course document while presenting the material in concise English.

Applicant	CHENG-HSUAN LEE
Project	Quadcopter Ball-Transfer Drone
Course	Practice of Mechanical Engineering
Document Type	Worksheet
Primary Role	Team lead and integration contributor
Original Source	drone-second-project-worksheet.pdf (6 pages)

Executive Summary

This worksheet documented intermediate planning as the drone moved toward physical integration. It supported decisions about test priorities, subsystem risk, and next prototype changes.

The key value was converting early build experience into a practical path for later validation.

Applicant Contribution Signals

- Tracked integration risks across airframe, payload, electronics, and testing.
- Used worksheet checkpoints to keep the team from losing system-level priorities.
- Prepared the transition from concept work to evidence-driven iteration.

Worksheet Function

Clarify what had been tested, what remained uncertain, and what the next build cycle needed to answer.

Technical Decision Table

Constraint	Decision	Why It Mattered	Skill Demonstrated
Prototype uncertainty	Recorded test priorities	Made the next build cycle measurable	Engineering planning
Subsystem interaction	Tracked airframe and payload risks	Reduced late integration conflict	System integration
Team execution	Clarified responsibility and next tasks	Supported steady progress	Leadership

How to Read This Evidence

This document is intended to help a reviewer quickly understand the engineering content of the original report in English. The original PDF remains available in the project archive as the source artifact with its original figures, tables, screenshots, and course formatting.
